# FACIAL PROCEDURES

*Look your best, feel great and smile with confidence*

Whilst most people would agree that character is more important than appearance, it is understood that a person's appearance can impact on their sense of self-worth. Over time, diet, lifestyle and exposure to sunlight can all take their toll, with the most visible signs generally seen in the face. And, if there's something you don't like about the way you look, it can make you feel insecure and self-conscious. Similarly, facial scarring and disfigurement can also decrease your confidence.

Therefore, more and more people are turning to facial cosmetic surgery to boost their quality of life.

Facial plastic surgery can significantly reduce the signs of premature ageing, balance facial features and create a fresher, natural, more youthful appearance.

Named by Tatler and Vogue as one of the best plastic surgeons in the world, Prof. Kirwan performs an extensive range of cosmetic and reconstructive procedures that includes:

**Brow Lift**

**Chemical Peels**

**Short Scar Face Lift**

**Brow lift**

**Eye Lift**

**Chin Implants**

**Facial Implants**

**Rhinoplasty**

**Otoplasty**

**Face Lift**

**Cheek Implants**

**Mole Removal**

**Scar Revision**

Also known as a forehead lift, brow lift surgery reduces the appearance of furrows and frown lines on the forehead and lessens hooding over the eyes, leaving the patient with a more youthful, rested and refreshed look.

## **Eye lift**

This surgery, also known as blepharoplasty, removes excess fat and extra skin from the upper and lower eyelids, reducing the appearance of saggy eyelids and bags beneath the eyes, resulting in younger-looking eyes.

## **Rhinoplasty**

Rhinoplasty, commonly known as a nose job, can improve the shape and appearance of the nose by lowering bumps on the bridge, straightening a crooked nose, altering the shape and angle of the nose tip or narrowing the nostrils.

## **Cheek Implants**

Cheek augmentation can be used to correct deficient cheek development or provide a more attractive definition to the face by creating the appearance of larger, fuller or higher cheekbones.

## **Chemical Peels**

Chemical peels vary in strength and can be used to reduce wrinkling, superficial blemishes and pigment problems. A chemical peel will also tighten the skin and stimulate the production of new skin cells, resulting in improved complexion and a more youthful appearance.

## **Chin Implants**

Chin augmentation can help to strengthen the jaw line, creating a stronger profile and more balanced features. It can benefit people with a receding chin or poor definition of the neck.

## **Otoplasty**

Otoplasty, also known as ear surgery or ear pinning, can benefit young children and adults who suffer from overly large or protruding ears. It creates a more natural and balanced look which can also help to renew self-confidence.

## **Mole Removal**

You may want a mole removed because you find it unattractive or it protrudes and is irritated by activities such as shaving. Mole removal can be quick and easy, and can leave you blemish-free.

## **Short Scar Face Lift**

A face lift is can help to turn back the effects of time and rejuvenate your looks. The main differences between this procedure and a standard face lift are that it requires no staples, the scar is shorter and the recovery time faster.

## **Laser Resurfacing**

Laser resurfacing can be used on the entire face, or on specific areas, to reduce the signs of wrinkles and blemishes, leaving the skin looking more youthful and radiant.

## **Face Lift**

A face lift tightens muscles in the face and neck and rejuvenates facial features such as the cheeks and lips, leaving you with a long-lasting, natural and youthful looking appearance.

## **Scar Revision**

Scars can be unsightly or embarrassing but with dermabrasion or surgical scar revision their appearance can be made less obvious, or they can be concealed by repositioning them in less obvious places such as the hairline or a fold of skin.
